Document Management Procedure

This document highlights how Quality Management System (QMS) documents are managed and monitored to ensure that:

- All documents are adequately identifiable, traceable, and updated.
- Obsolete documents are promptly removed from the organization's repository to prevent further usage.
- Deprecated documents are stored in the [redacted] folder for a limited time.
- Outdated documents are queued for revisions.

This procedure applies to all the documentation and records within the Quality Management System.

Document Life Cycle

Creation

The first draft of procedures, instructions, or forms comes from the *Department Managers*, given that they know the process best.

The name of the manager will be reflected in the **Created by** column in the **Version Control** table from the **Revision History** section.

Updating a Document

When a document update is needed, the initial draft of changes is provided by the *Department Managers* via email. The manager's name will still appear under the **Created by** column, together with a short update description under **Change Summary**.

- For minor updates, such as change in terminologies, spelling corrections/guideline adjustments, screenshot updates, and modifications that don't require a complete re-structure of the existing document – the *Department Managers* may create in-line comments on the published content.
  - The *Technical Writer* will create a Jira Ticket bearing the screenshots of the in-line comments for tracking.

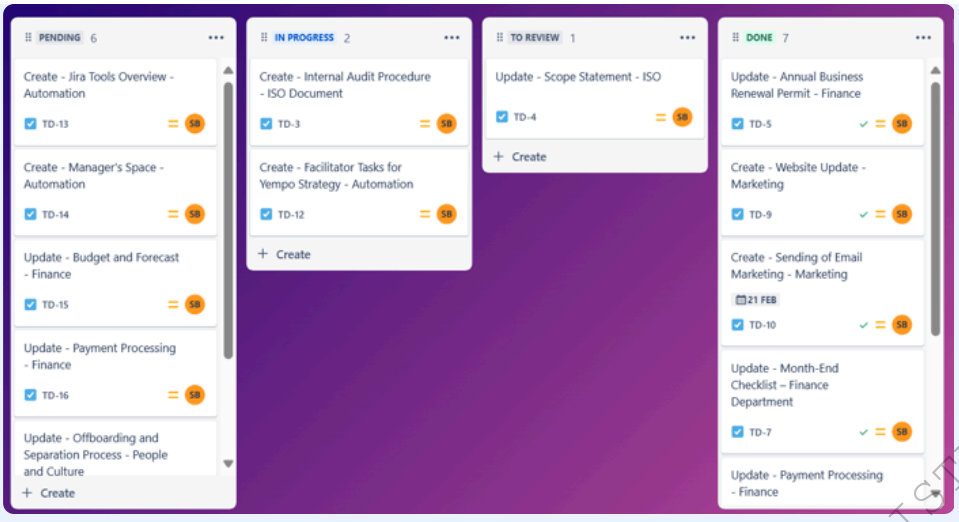

Updating a document follows the *same process* of verification and approval as when creating a new one.

- For requests on creating new process documents, updating existing ones, or deprecating articles, send an email to document [redacted].com with the subject line:
  - Create - [Title of the Draft] - Department
  - Update - [Title of the Document] - Department
  - Deprecate - [Title of the Document] - Department

  The sender will receive an acknowledgement email that includes a link to the Technical Documentation [redacted] Jira.

  This board serves as a tracker to all the requests created and their statuses, depending on the current progress:

MARY SHARRA · DOCUMENTATION PORTFOLIO · NOT FOR DISTRIBUTION

The requester may also ask for additional update/changes pertaining to or relating to the document mentioned in the ticket; this may lead to creation of a new ticket, bearing the same ID convention in Jira.

Turnaround Time for Document Requests

To determine the estimated turnaround time, the Document Requests for Creation and Update can be categorized by the requesters based on priority as follows:

> The ETAs listed below all start from the date of receipt and acknowledgement.

- **High Priority** - Urgent Items - 1 to 2 Days
- **Mid Priority** - BAU Items - 1 to 2 Weeks
- **Low Priority** - Items with Minor Updates - 3 to 4 Weeks

For Deprecate requests, the turnaround time is within a week of receipt.

> In the organization's case, wherein raw process documents are yet to be published in the [redacted] Process Documentation Space, the *Technical Writer* may create new tickets to tackle document batches per *Department* and follow the standard procedure for the Approval Process.

Verification

Drafts of procedures, instructions, and forms may be subject to verification by the *Technical Writer*. The verification process ensures that the content drafts are revised according to the writing style standards implemented for published copies in Confluence.

The name of the verifier is recorded in the **Verified by** column.

Approval

MAR-SHARIA DOCUMENTATION PORTFOLIO • NOT FOR DISTRIBUTION

The approval of the document is done by the *Director of People & Culture*.

The name of the approver will be documented under the **Approved by** column.

> For minor updates, the changes will be implemented by the *Technical Writer* and only be approved by the *process owner* or *Department Manager*.
>
> - For such updates, the document version will be incremented using a minor version number (e.g., 1.1, 1.2, and so on) following the last whole-number version.
> - Once approved, the comment will be marked as Resolved and the Jira Ticket will be closed.

Revision History

Date	Version	Created By	Verified By	Approved By	Change Summary

The **Revision History** section is placed at the bottom-part of each document to serve as the *version control* of the file. The details filled out include:

- Date of publishing
- Current/last version of the document
- Name of the initial draft's writer
- Name of the draft's verifier
- Name of the final draft's approver
- Change summary (applicable for updates)

> For the **Numeric Versioning**, major updates will increment the whole version number, while minor updates will increment the decimal number.

Expiration

Documents that no longer accurately reflect the current process or contain outdated information must be set aside for further evaluation.

- Procedures, instructions, or forms, that are *obsolete* to the current process should be unpublished from Confluence and stored in the **Archives** folder in SharePoint. These documents will be stored in this directory for [redacted]o remain accessible, should there be a need to retrieve specific details upon removal from the live platform.

MARI SHARKA DOCUMENTATION PORTFOLIO NOT FOR DISTRIBUTION

- Records that are overridden by new data should be marked as **Expired** and removed from the repository.
- Documents with outdated details should be up for revision in line with the current process.

> Documents should undergo an annual review towards the fourth quarter to determine which ones should be archived, updated, or marked as expired.

Coding

Before their official approval, QMS documents will be assigned a unique automated code to ensure traceability. Each QMS document, whether stored in SharePoint or Confluence, will have an individual form that would serve as a *tracking library*.

When publishing a new document, a form will be filled out with the details needed to identify its scope, such as:

Document Type

- ISO – Documents with this code at the beginning of the ID are part of the relevant files to be audited in the ISO project.

> Documents not involved with the ISO audit will have their ID to start with the **Department Scope** followed by the **Format Type**.

Department Scope

- **Automation** – AU
- **People & Culture** – PC
- **Talent Acquisition** – TA
- **Payroll** – PR
- **Business Intelligence** - BI
- **ICT** – IT
- **Finance** – FN
- **Marketing** – MN

Format Type

- **Form** – FRM
- **Policy** – POL
- **Agreement** – AGM
- **Checklist** – CKL
- **Procedure** – PRO

> The *generated ID* would look like this:
>
> - PC.PRO.12345
> - ISO.12345

MARY SHARRA · DOCUMENTATION PORTFOLIO · NOT FOR DISTRIBUTION

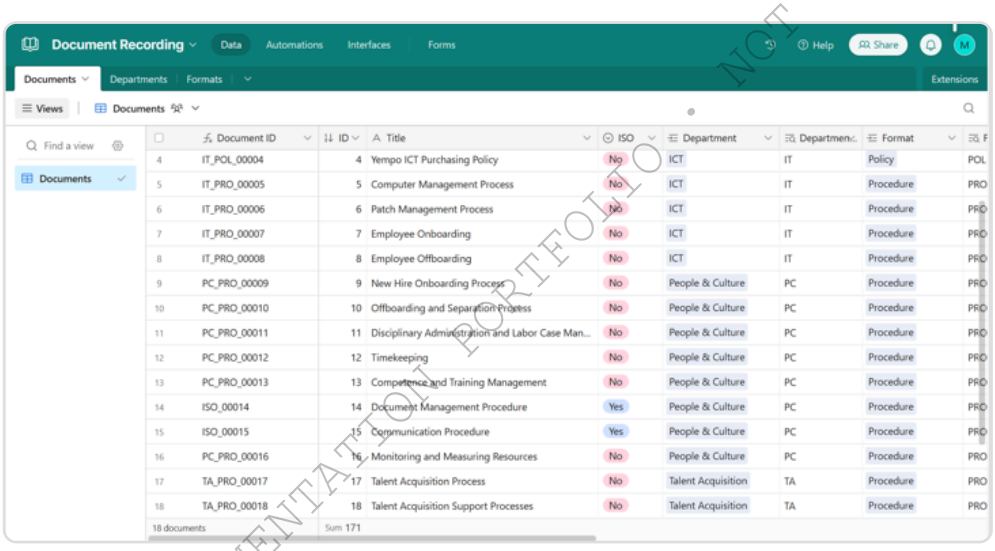

- FN.CKL.12345

Take note that labels appear in *lower case* when applied on documents published in Confluence like so:

- pc.pro.12345

- *ISO documents*' ID is written beginning with **ISO** in the ID, followed by a period, and then the generated numeric code.
- *Process documents*' ID is written starting with the **Department Scope** separated with an underscore, followed by the **Format Type**. Next to the code is a period and then the generated number.

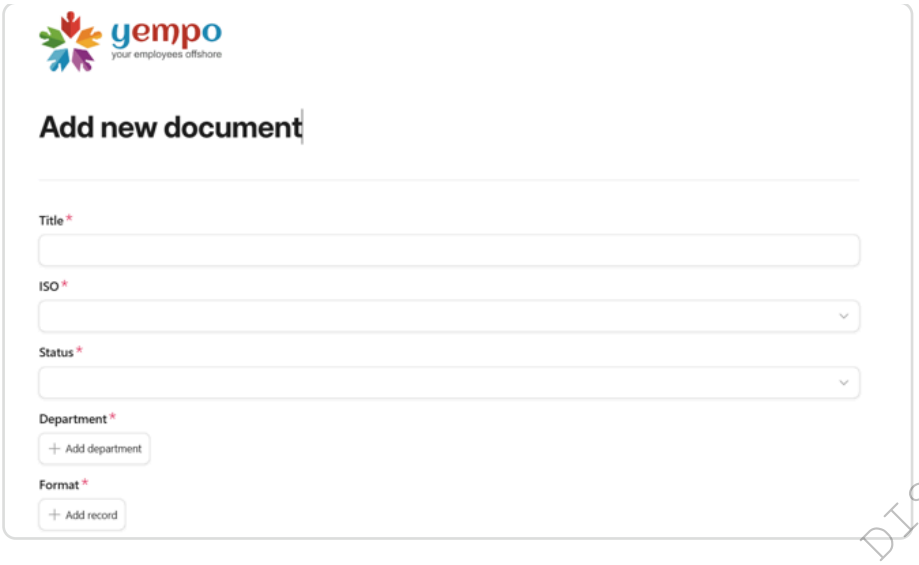

Document ID Generation via AirTable

Documents are stored in a library via the [Document Recordi [redacted]](), where each one is generated a **document ID** and categorized by *department*, *document format and type*, *status of usage*, and *ISO-relation*.

1. To register a new document, fill out this [redacted] ith the necessary details.

MARY SHARRA

NOT FOR DISTRIBUTION

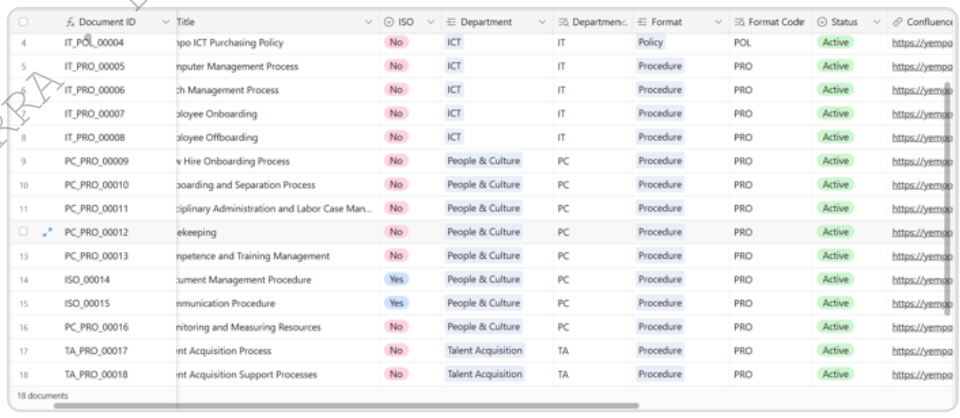

Elements with an asterisk (*) are critical information in order to accurately sort the document. Each field appears as column headers in the AirTable library. The secondary fields below reflect additional information for the user's accessibility on the document and its current status.

- **Confluence** - contains the document's live link for easy access when viewing the AirTable library.
- **Notes** - may comprise of a quick description regarding the document.

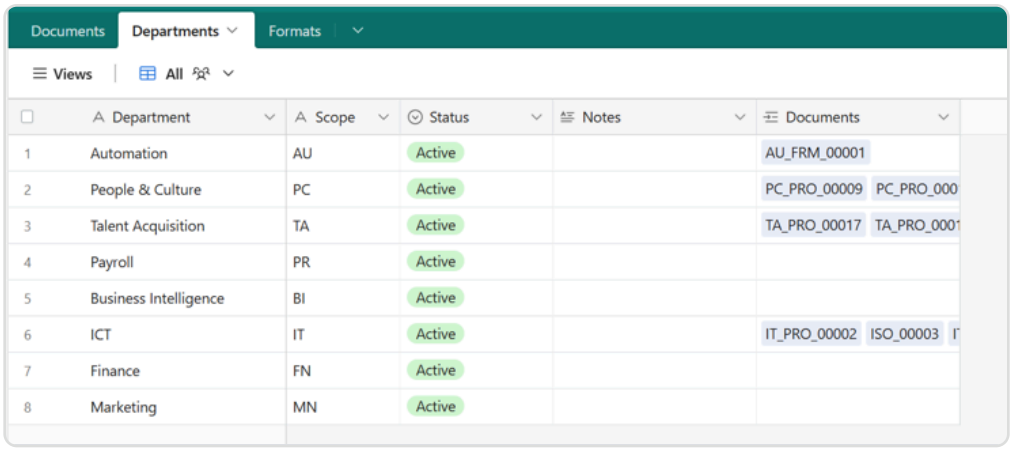

2. Once the form is submitted, the listed document will be added to the AirTable library.

The documents may also be viewed either by **Departments** or **Formats**.

5	Procedure	PRO	Active		IT_PRO_00002 IT_PRO_00005

Distribution

QMS documents are shared with the relevant interested parties. This activity is a shared responsibility of the *QMS Team* and the *Technical Writer*.

The *Technical Writer* is also responsible for monitoring and managing outdated documents. Documents as such shall either be determined *Obsolete* or updated accordingly.

Storage

All QMS documents are stored in the official repository, which is in [redacted]Each department has its own **Space**, wherein their corresponding documents are published.

A Document Tracker is also maintained as a secondary reference to the AirTable library.

Records

The archiving of Records is done as specified in the following table.

Records	Minimum Years of Retention

MARY SHARRA • DOCUMENTATION PORTFOLIO • NOT FOR DISTRIBUTION

Risk assessments	5 years
Legal requirements and legal compliance audits	5 years
Non-conformities, corrective actions	5 years
Training and/or educational activities	5 years
Internal and external communications	5 years
Expired revisions of QMS documents	5 years
Management Reviews	5 years
Software Tool/Device Maintenance	5 years
Documentation on Occupational Health and Safety	5 years

Definition of Terms

Terms	Definition
QMS Document List	This document is the list of all the procedures, instructions and forms of the QMS.
Quality Documents	Documents necessary for the QMS that need to be checked at least once a year during the Management Review.
Records	All the documents that are a result of a process are technical records.
Version Control	This section displays the version details of an article, including the author, date created/revised,
