Cleaning Operations Audit

Standard Operating Procedure

Purpose:

This SOP defines how the Operations Team at Woldenga Property Services performs daily audits of cleaning cases, schedules, timesheets, mileage, and related operational records.

The goal is to ensure completed work is accurately recorded, service standards are verified, and eligible cleaning cases are properly approved for payroll.

Scope:

- This SOP applies to Operations Team members responsible for completing daily operational audits.
- It covers auditing cleaning cases, completion times, service standards, timesheets, mileage, the Daily Audit Dashboard, and the database.
- It also outlines how quality complaints and touch-up cleans should be handled during the audit process.

Table of Contents

1. Daily Audit Dashboard
2. Completion Time Audit
3. Standards Met and Quality Complaints
4. Timesheet Audit
5. Mileage Audit

6. Cleaning Database Audit

Standard

1. Daily Audit Dashboard

Use the Daily Audit Dashboard to review completed cleaning cases for the day.

For each clean, verify:

- Whether the clean was completed
- Whether it was completed on time
- Whether service standards were met

Once the audit is complete, update the case status to Reviewed.

Important: Complete the dashboard audit daily to reduce the risk of completed cleans being missed.

2. Completion Time Audit

Check the clean's actual completion time in ResortCleaning and compare it against the applicable schedule and guest check-in time.

Completed On Time

Tick the completion box when the clean was completed within the required timeframe:

- **Back-to-back cleans:** The clean is completed before the property's standard check-in time.
- **Regular checkout cleans:** The clean is completed by [redacted] PM.

If the requirements aren't met, the clean should be considered as Incomplete, and the completion box should not be ticked.

Use the recorded check-in, check-out, and completion information in ResortCleaning to verify the actual timing.

3. Standards Met

Before marking a clean as Standards Met, review any feedback or complaints from the Property Manager or Market Manager.

Quality Complaints: Complaints related to the cleanliness or quality of the completed clean should be considered when determining whether the clean meets standards.

General Feedback: General observations, suggestions, or improvement feedback from the Market Managers should be reviewed for awareness, coaching, and continuous improvement but should not automatically be treated as a quality complaint or prevent the clean from being marked as Standards Met.

4. Timesheet Audit

Review the Market Manager's timesheet and verify that the recorded hours accurately reflect the work completed for the day.

Compare the timesheet against:

- Scheduled inspections
- Actual clock-in and clock-out times in ResortCleaning
- Actual inspection start time and end time

If you find any discrepancies, make the necessary corrections to ensure that the timesheet accurately reflects the actual hours worked.

5. Mileage Audit

Review all the properties assigned to the Market Manager in ResortCleaning for the day and manually add each assigned property to the Mileage Sheet.

Once all assigned properties have been logged and verified:

1. Click "Calculate Miles" to calculate the total mileage.
2. Confirm that the displayed total mileage and corresponding reimbursement amount are shown correctly.

Accurate mileage records are required to support the applicable gas reimbursement.

6. Database Audit

Review the database for the specific day being audited and make sure all the cleaning cases in ResortCleaning are accurately reflected in the database.

During the audit:

1. Compare the day's cleaning cases in ResortCleaning against the database.
2. If a cleaning case has been cancelled in ResortCleaning, remove it from the database.
3. If there's a new cleaning case in ResortCleaning, add it to the database.
4. Once all the cases are reviewed, update the each status accordingly:
    - **Approved** - No quality complaint was reported and the audit is complete.
    - **Pending** - A quality complaint has been reported.
5. For cleaning cases with a quality complaint, update the status to **Approved** only after the required reclean has been completed and the case is fully resolved.

Important: Cleaning cases must be updated to Approved after the audit. If a completed clean is not approved in the database, it may not be included in the housekeeping professional's payroll.

Compliance

The Operations Team members are responsible for completing the Cleaning Operations Audit accurately and within the required daily timeframe.

Compliance with this SOP requires that:

- All completed cleaning cases are reviewed in the Daily Audit Dashboard each day.
- Completion times are verified against the applicable check-in and checkout requirements.

MARY SHARRA • DOCUMENTATION PORTFOLIO • NOT FOR DISTRIBUTION

- Standards Met is determined based on documented quality complaints and relevant feedback.
- Market Manager timesheets are reviewed and corrected when discrepancies are identified.
- All properties assigned to the Market Manager are accurately recorded and verified in the Mileage Sheet.
- The Database is reconciled against ResortCleaning, including adding new cases and removing cancelled cases.
- Cleaning cases are assigned the correct database status, including Approved or Pending, based on the audit results.
- Quality complaints are properly documented and tracked, and cases remain Pending until the required reclean or resolution is completed.
- Approved cleaning cases are updated promptly to ensure eligible work is included in housekeeping professional payroll.

Failure to follow the requirements outlined in this SOP may result in corrective guidance, additional coaching or clarification, and/or a review of the affected records, depending on the nature and frequency of the issue.

Consistent compliance with this SOP is required to maintain accurate operational records, proper payroll processing, and service quality standards.
