Using the Directory

View in Help Scout (https://secure.helpscout.net/docs/64806a7eca8d057c065304f4/article/69ee72a6707abf384dcc100d)

The Network Directory allows you to create and manage profiles for your team while keeping everything organized in one place.

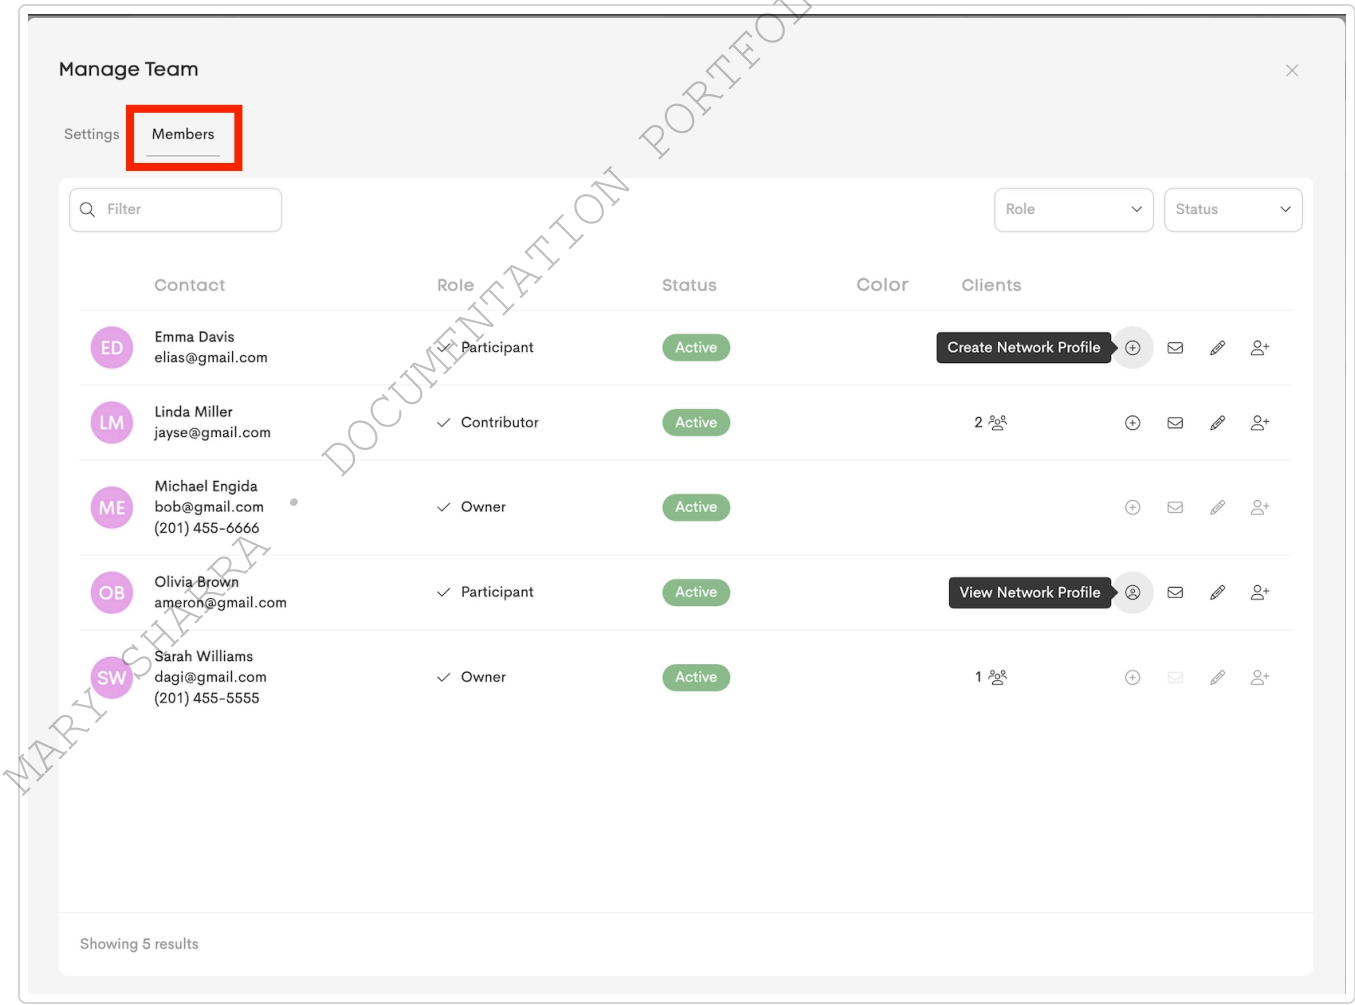

With flexible filters and search options, you can quickly find and work with the profiles you need.

Creating & Managing Profiles

You can create and manage network profiles for your team in two simple ways:

Create Individually

1. Go to the **User Menu** on the upper-right corner.
2. Select a **Team Name** under the **Switch Team** section.
3. In the **Manage Team** window, go to the **Members** tab.

4. Select a contact to create a network profile for.

Bulk Import

1. Go to the **Clients** tab, choose **Network** from the side menu, and click on **Directory**.

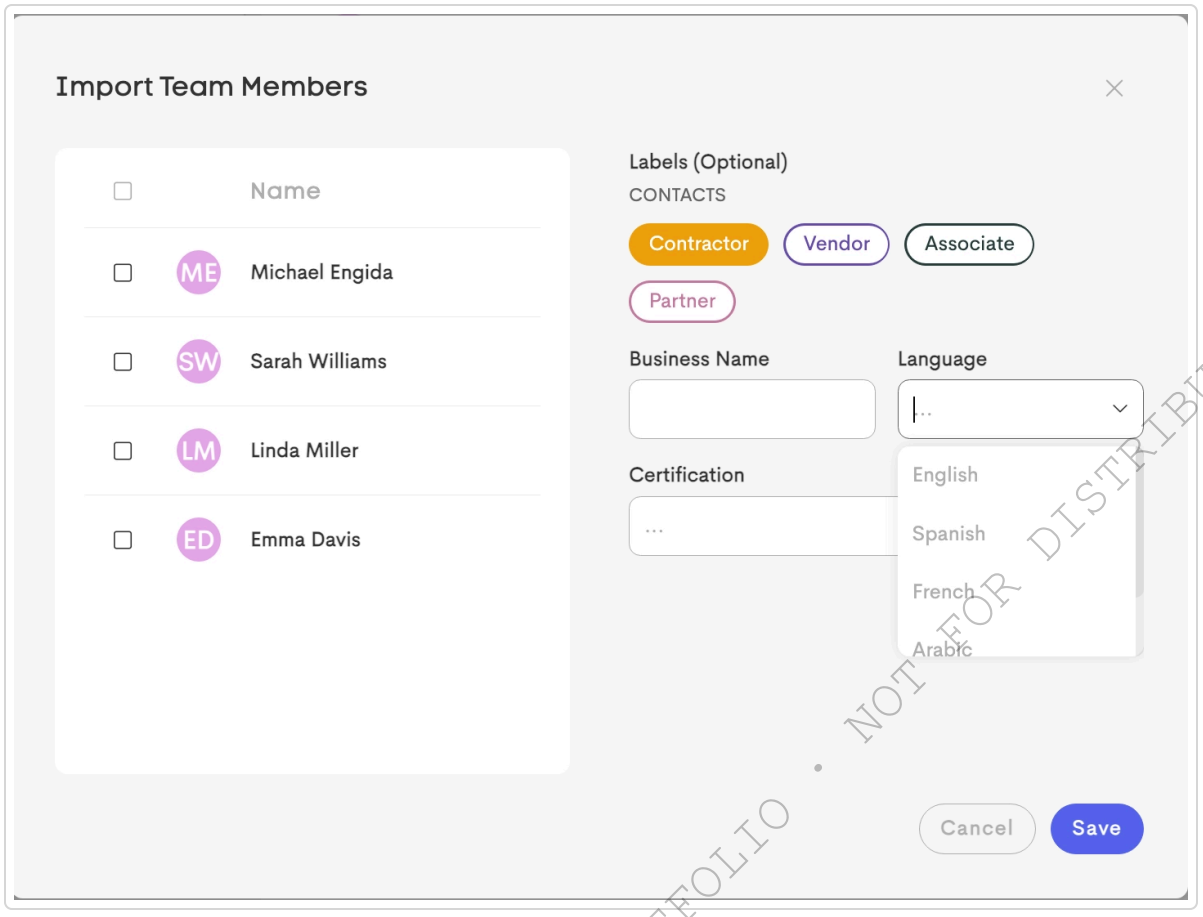

2. Click on **Import** to select all (or choose specific ones) and generate their profiles in a single batch.

- The list automatically detects and displays all team members who **do not** yet have a network profile.
- You can select specific members and assign **labels** or **custom field values** (like *Language*) directly in the import window.

Profiles are created automatically with the selected details applied.

Filtering & Search

The Directory makes it easy to quickly find the profiles you need using flexible filtering options.

You can apply multiple filters at the same time using the sidebar to narrow down results.

Standard Filters

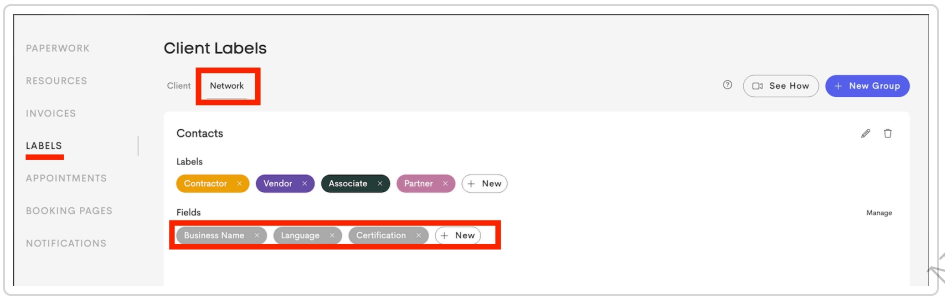

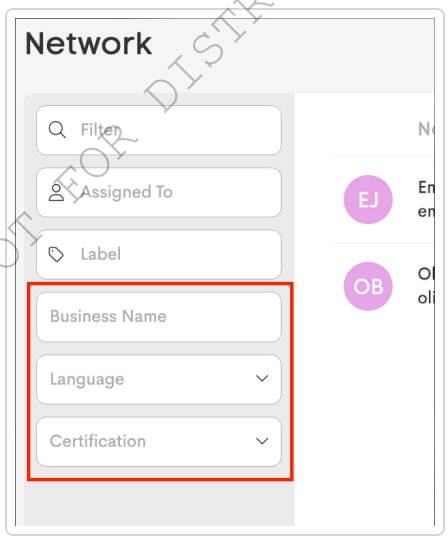

DOCUMENTATION PORTFOLIO • NOT FOR DISTRIBUTION
MARY SHARRA

- **Search:** Find profiles by first name, last name, email, city, or profile ID
- **Assigned To:** Filter profiles by the team member managing that connection
- **Labels:** Filter the list by specific labels added to their profiles

Dynamic Custom Filters

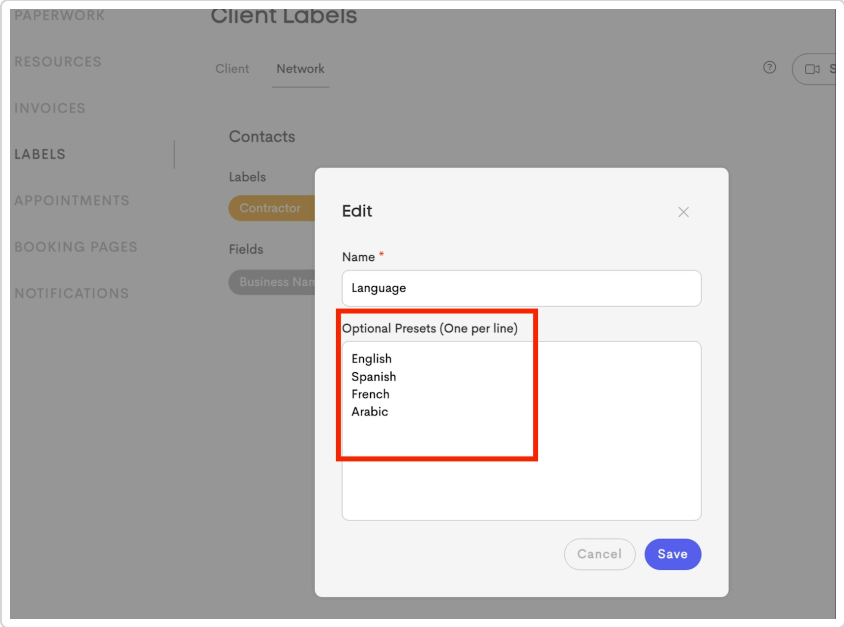

- Any **custom fields** you've added (such as *Language*) under a **Network Label Group** will automatically appear as filters in the Directory.

- If the field has preset options, you'll see a dropdown to choose from.
  - If not, you can type in a value manually.

As soon as you select or enter a value, the list updates instantly to show matching profiles.
